

## **MAGNUM<sup>®</sup> Fuel Cell**

### **Test facilities and services** **outsourced, reliable and efficient**

More and more fuel cells are becoming a real alternative as seminal power supply in different applications. Due to this fact, there is an increased need for development and optimisation work. However, testing facilities and qualified human resources matching all required measurement and investigation needs are often scarce in high-tech, developing companies.

There is a solution for this bottleneck in personnel, equipment and resources. To satisfy the growing demand, MAGNUM will enlarge its testing capabilities by building up a new hydrogen laboratory. Now your measurements can easily be outsourced. You determine your requirements and MAGNUM will deliver the results, be it the provision of simple test data or offering full service to your fuel cell development.

With many years of experience in the area of fuel cells, MAGNUM has state of the art fuel cell test benches as well as qualified staff at its disposal.

Take advantage of our skills and benefit, lower your costs while accelerating your development process.

## **Product Information**

**MAGNUM<sup>®</sup> Fuel Cell**

## **Services**

- § Fuel cell measurements on demand
- § Data acquisition and evolution
- § Single cell testing
- § Stack testing
- § Electrochemical measurements
- § Fast
- § Objective
- § Cost saving
