

All-time high: 120 exhibitors signed up for 13th Group Exhibit H2/FC at HANNOVER MESSE 2007, April 16-20, Hall 13

Ballard, Hydrogenics, Parker Hannifin, IdaTech, Plug Power, BASF Fuel Cell - just to name a few of the 120 international exhibitors from 20+ countries who will participate at Europe's largest and most important H2/FC exhibition: the Group Exhibit Hydrogen + Fuel Cells, April 16-20 in Hannover, Germany. Founded in 1995 by Arno A. Evers, the Group Exhibit H2/FC has now reached an all-time high in exhibitor participation.

Global players, SMEs and research institutions will be presenting their products and developments from all sections of this fast growing industry: hydrogen production, fuel cell components, stationary, portable and mobile fuel cells, fuel cell applications, test systems for fuel cells, reformers, hydrogen transport, storage and infrastructure.

The Linde Group, CEA, the State Initiatives of Hessen and Hamburg as well as Initiative Brennstoffzelle (IBZ) will mark the entrance to the 3,000m² exhibition area in Hall 13, along with Norway's Hydro Oil & Energy Hydrogen Technologies and Australia's Ceramic Fuel Cells.

Long-time exhibitors like Saia-Burgess, SGL Carbon, Vaillant, Viessmann and Dana will highlight the progress in their area of specialization, while brand-new exhibitors such as H2Gen, Nordic Power Systems, Wärtsilä and Raufoss will show off their products for the very first time as members of this H2/FC community. The Group Exhibit H2/FC is also a renowned platform for research institutions like Forschungszentrum Jülich, Forschungszentrum Karlsruhe and Fraunhofer Institute für Solare Energiesysteme.

In addition to record numbers, the 2007 Exhibitors List reveals a substantial increase in North American participants including names like Siemens Power Generation, Caran Precision, AMREL, Angstrom Power, Protonex, Power Air Corp. and Perma Pure.

At the heart of the Group Exhibit H2/FC, visitors will find the H2/FC information hub – the Forum – where company heads and leading researchers will present their latest developments.

The 6,000+ exhibitors at HANNOVER MESSE 2007, the world's largest energy and industry trade fair, will attract an estimated 200,000 international visitors.
