

## The Group Exhibit Hydrogen + Fuel Cells

Europe's largest and most important H2/FC exhibit

---

The Group Exhibit Hydrogen + Fuel Cells (H2/FC) is a 14-year-old community of established firms, middle-sized companies and renowned research institutions who showcase the full spectrum of H2/FC-related technology: hydrogen production, fuel cell components, stationary, portable & mobile fuel cells, fuel cell applications, test systems, hydrogen transport, storage & infrastructure, reformers and beyond. At the 2008 Group Exhibit H2/FC, around 150 international companies and institutions will exhibit their hydrogen/fuel cell-related products & services, making this Europe's largest and most important H2/FC exhibit.

This H2/FC platform supports participants in making essential connections through Forum interviews, networking evenings and meeting points. The Forum offers a chance for the general public to hear which products and services are emerging in the world of hydrogen and fuel cells.

Since May 2006, the company Tobias Renz FAIR-PR orchestrates this Group Exhibit H2/FC, under the commission of Deutsche Messe AG, Hannover.
